Does the Moto Watch 120 Have Sound for Notifications and Alarms?

Inas B. - 2025-10-10 - Product Features

The Moto Watch 120 is designed to keep you informed in a **subtle and balanced way** — using both **vibration** and **sound** where it makes the most sense.

Here’s how each type of alert works:

Notifications

- **Vibration only:** When you receive messages, calls, or app alerts, your Moto Watch 120 will **vibrate** to let you know.
- **No sound:** Notifications don’t include sound alerts — this keeps things discreet while still keeping you in the loop.

Alarms

- **Vibration only:** Alarms rely on **gentle vibration** to wake you or remind you without making noise.
- Ideal for quiet environments or shared spaces where you don’t want to disturb others.

Ringtones

- **Sound enabled:** The Moto Watch 120 **does play sound for incoming call ringtones**, so you can hear when someone’s calling.
- You can **adjust the ringtone volume** directly in your watch’s settings.

By combining vibration and sound thoughtfully, your Moto Watch 120 delivers important alerts while staying comfortable and unobtrusive throughout your day.
