How Do I Adjust the AI Assistant Volume on the Moto Watch 120?

Inas B. - 2025-10-10 - Product Features

When you use your Moto Watch 120 to talk to your phone's AI assistant, like **Google Assistant** or **Siri**, the sound volume is actually controlled by your **phone**, not the watch.

Adjusting the AI Assistant Volume

On Android

- Press the **volume buttons** or go to **Settings > Sound & Vibration**
- Adjust the **Media** or **Assistant** volume sliders.

On iPhone

- Use the **side buttons**, or go to **Settings > Sounds & Haptics**
- Adjust the **Siri** volume to your preference.

Test the Volume

1. Activate your AI assistant from the Moto Watch 120.
2. Make sure the sound from your phone is at the level you prefer.

Check Bluetooth Connection

Ensure your Moto Watch 120 is **connected to your phone via Bluetooth**; this ensures the assistant responds and plays audio smoothly.

By adjusting the settings on your phone, you can fine-tune the AI assistant's volume for the best hands-free experience.
