Body Temperature Monitoring and the Moto Watch 70

Inas B. - 2025-10-08 - Product Features

The Moto Watch 70 offers a variety of health and fitness tracking features. However, it **does not include a body temperature sensor**, which was removed before the device's release.

Why Was the Body Temperature Sensor Removed?
During development, the body temperature sensor was evaluated but did not meet the required accuracy and performance standards. The final decision focused on delivering reliable core features such as:

- Heart rate monitoring
- Sleep tracking
- Activity tracking

What If You See a Body Temperature Sensor?
If your device shows a body temperature sensor or mentions this feature, contact our support team. This could be a mistake, and we can guide you further. Please provide your watch's serial number (found in Settings > About) to help with the investigation.

While the Moto Watch 70 doesn't track body temperature, it remains a reliable smartwatch for key health and fitness metrics. For users needing temperature monitoring, contact our support team or consider other devices with this feature.
