Charging Your Moto Watch 40

Inas B. - 2025-10-10 - [Troubleshooting & Setup](#)

Proper charging is essential to keep your **Moto Watch 40** working at its best and to maintain long-term battery health. Follow these steps to charge your watch safely and efficiently.

Initial Charging

Before using your watch for the first time—or after it hasn't been used for a while—it's a good idea to charge the battery fully. Battery life may vary depending on factors like Wi-Fi, app usage, and notifications.

Use the Included Charging Cable

Always use the charging cable provided with your Moto Watch 40. Using other cables or chargers may damage internal components, slow charging, or affect the battery and magnetic pins.

Charging Steps

1. **Connect the USB End:** Plug the USB end into a computer or power adapter.
2. **Prepare the Watch:** Ensure the back of the watch is dry and free of dust or debris.
3. **Align the POGO Pins:** Place the charger's pins near the metal pins on the watch back.
4. **Magnetic Alignment:** Magnets in the charger and watch will align automatically, starting the charging process.
5. **Check Charge Level:** The watch vibrates and shows the current battery level while charging.

Full Charge for First Use

For the best performance, charge your watch to **100%** before first use. This ensures you start with optimal battery life and performance.

By following these simple guidelines, your Moto Watch 40 will perform at its best and remain reliable for years to come.
