GPS Functionality on Moto Watch 120

Inas B. - 2025-10-09 - [Product Features](#)

The Moto Watch 120 features **assisted GPS (A-GPS)** technology, allowing you to accurately track outdoor activities such as walking, running, and cycling. This helps you monitor **distance, pace, and route details** during workouts — all without needing to carry your phone.

Key Points

- **Supported Activities:**
GPS tracking works for outdoor fitness activities like walking, running, and cycling.
- **No Navigation Support:**
The Moto Watch 120 does **not** provide turn-by-turn navigation or driving directions from apps such as Google Maps. Navigation instructions cannot be viewed directly on the watch.

While the GPS feature is ideal for fitness tracking and activity monitoring, use your phone or a dedicated GPS device if you need detailed navigation or route guidance.
