Monitor and Optimize Your Moto 360 Battery Life

Inas B. - 2025-10-13 - [Product Features](#)

Your Moto 360 is packed with features, and keeping it powered efficiently ensures uninterrupted performance. With a few simple steps, you can monitor battery usage and manage power-hungry apps for an optimal experience.

Check Battery Usage:

1. Open the **Wear OS** app on your paired smartphone.
2. Ensure your watch is connected.
3. Tap **Advanced Settings** within the app.
4. Select **Watch Battery** to view detailed battery information.

Here, you'll see which apps consume the most power and get an estimate of remaining battery life.

Optimize Battery Performance:

- **Monitor Below 20%:** Keep an eye on the battery when it falls below 20% to identify apps that may be draining power excessively.
- **Initial 24-48 Hours:** Expect slightly higher battery usage during the first day or two. This is normal as the watch downloads updates and syncs apps.

Regularly reviewing battery usage helps you manage your Moto 360's power efficiently, extending battery life and ensuring a seamless smartwatch experience.
