## Moto 360 Software End of Life

Inas B. - 2025-10-13 - [Troubleshooting & Setup](#)

The Moto 360 has officially reached **software end of life**. This means Motorola will no longer provide software updates, feature enhancements, or security patches for this smartwatch. While your Moto 360 will continue to function, it will no longer receive improvements or official support to address future software or security issues.

### What You Can Do

1. **Consider an Upgrade:**

To continue enjoying the latest smartwatch features, improved performance, and security updates, consider upgrading to a newer device. Models such as the **Moto Watch 100** provide a more modern experience, longer battery life, and access to the latest Wear OS updates.

2. **Backup Important Data:**

Before transitioning to a new device or performing any major changes, back up your workouts, app data, watch faces, and personal information. This ensures you won't lose your important data and can seamlessly continue your smartwatch experience on a new device.

3. **Explore Alternatives:**

While the Moto 360 remains functional, exploring newer models or other smartwatches allows you to benefit from updated software, enhanced health features, and better connectivity. Consider factors such as app compatibility, battery life, and integration with your phone and apps.

4. **Stay Informed and Supported:**

Even though official software support has ended, our customer service remains active to answer any questions. Whether you need help transferring data, setting up a new device, or troubleshooting your Moto 360, we're here to ensure a smooth transition.

□ **Tip:** For those who want to keep using their Moto 360 safely, regularly review app permissions, avoid installing unsupported software, and maintain backups. This will extend the usability of your device even after official updates have stopped.
