Secure Your Moto 360: Set It as a Trusted Device

Inas B. - 2025-10-13 - Troubleshooting & Setup

Make your Moto 360 work smarter for you. By adding your smartwatch as a **trusted device** through Smart Lock, your paired smartphone can unlock automatically when your watch is nearby—offering both convenience and security.

How to Add Your Moto 360 as a Trusted Device:

1. Open **Settings** on your paired smartphone.

2. Tap **Security**, then select **Smart Lock**.

3. Enter your device credentials (PIN, pattern, or password) if prompted.

4. Choose **Trusted Devices** within Smart Lock.

5. Tap **Add Trusted Device** and follow the on-screen instructions to complete the setup.

How It Works:
Once added, your Moto 360 will automatically keep your smartphone unlocked when it's within close range (approximately 100 meters). Your device remains secure when your watch is out of range or disconnected.

Important Note:

- If your phone is governed by corporate security policies—such as work email accounts—access to Smart Lock features may be restricted.

By setting your Moto 360 as a trusted device, you combine enhanced convenience with intelligent security, ensuring your smartphone is accessible when you need it and protected when you don't.
