Moto Watch 40 Water Resistance (IP67 Rating)

Inas B. - 2025-10-10 - Product Features

The Moto Watch 40 is designed with **IP67 water and dust resistance**, providing reliable protection during everyday activities. While the watch can handle brief exposure to water and resist dust, it is important to remember that it is **not fully waterproof**. Here's what you need to know to keep your watch safe and performing at its best.

Understanding IP67

- **Dust Protection (6):** Complete protection against dust ingress, keeping your watch clean and functional.
- **Water Protection (7):** Can safely withstand immersion in water up to **1 meter for 30 minutes**. Ideal for rain, handwashing, or short, shallow-water activities.

Activities to Avoid

- **High-pressure water:** Avoid water skiing, jet skiing, or other high-speed water sports.
- **Soap, chemicals, and cosmetics:** Avoid exposure to soaps, shampoos, lotions, perfumes, or cleaning chemicals.
- **High heat environments:** Do not use in saunas, steam rooms, or temperatures above 45°C (113°F).

After Water Exposure

- **Dry thoroughly:** Use a soft, lint-free cloth to dry the watch, especially around buttons and the charging port.
- **Check before charging:** Never charge your watch while wet. Ensure the charging port is completely dry.
- **Rinse after saltwater:** If exposed to saltwater, rinse with fresh water and dry thoroughly.
- **Remove sweat:** Wipe the watch after intense activity to prevent corrosion.

Key Takeaways

- **IP67 means water-resistant, not waterproof.** Short immersion is safe, but avoid high-pressure or long-duration water activities.
- **Avoid harsh chemicals and extreme heat** to preserve seals and materials.
- **Dry and clean your watch** after water or sweat exposure.

By following these care tips, your Moto Watch 40 will stay protected, functional, and durable, making it a

dependable companion for your active lifestyle.
