Time Syncing on the Moto Watch 70

Inas B. - 2025-10-08 - Product Features

The Moto Watch 70 automatically syncs its time with your phone, keeping it accurate and up-to-date.

How it Works:

- **Automatic Syncing:** Once paired with your phone, the watch adjusts its time based on your phone's time zone and settings. Changes like daylight saving or traveling across time zones are reflected automatically.

- **No Manual Adjustment:** You cannot manually change the time on the watch; all changes must be made through your phone to maintain consistency.

This feature ensures your watch always shows the correct time. If any issues occur, reach out to support for assistance.
