# Understanding Weather on the Moto Watch 70

Inas B. - 2025-10-08 - Product Features

The Moto Watch 70 provides weather updates using OpenWeatherMap, a reliable weather service. However, weather data can sometimes differ slightly depending on your location or data source.

**How the Weather Feature Works**

- **Weather Source:** Weather information comes from OpenWeatherMap, which uses geographic coordinates (latitude and longitude) to provide accurate data. This may differ slightly from other apps or platforms.
- **Moon Icon:** The moon icon on the watch indicates clear night weather—not the current moon phase.
- **Location-Based Weather:** The watch uses your phone’s GPS to determine your location and fetch weather data. Inaccuracies can occur if GPS data is unavailable or if your area is not fully covered in the weather provider’s database.
